ONE AI SYSTEM FOR YOUR AGENCY

Your whole agency on one AI system.

It answers every call and chat, finds the flat, books the viewing, posts the ads and checks that it all keeps working. Your agents close the deals.

24/7
calls and chat

3
languages: ka · ru · en

70,000+
flats in search

4
platforms for your ads

Clients don't vanish. They go to the next agency.

21:40

A call during a viewing, a WhatsApp at night.

No answer until morning. By then the client has called the next agency.

By hand

Portals, ads, paperwork.

Every ad typed in four places, every contract from scratch. Your agents' hours go here.

+1 week

The client nobody wrote back to.

A new flat fits last week's brief exactly. Nobody remembers to send it.

One AI system does all three. Your agents close deals.

THE SYSTEM ON ONE MAP

Up front, the AI operator meets the clients. Backstage, the system does the rest.

FRONT DESK

- Calls: the AI alone, or an agent with the AI
- WhatsApp in three languages, with photo cards
- Viewings in the owner's hours
- New fits while the request is open

BACKSTAGE

- Home
- Inbox
- The agent's day
- AI checks the AI
- Results
- The whole market
- Listing score
- Owners, contracts
- Ads in 4 places
- Social
- Control and health

The engine: 70,000+ flats · a 0–100 score · matching to every request · client memory · a self-check every 2 minutes

2 · FRONT DESK TWO WAYS TO ANSWER THE PHONE

The AI answers alone, or your agent answers with the AI beside them.

The AI alone

- 24/7, in Georgian, Russian or English, in your agency's name
- Works out the brief, offers one flat, sends the photos to WhatsApp
- Saves the request and a summary of the call

or

Agent + AI

- The call rings an Available agent first, right in the browser
- The AI listens silently, fills in the brief and finds the flats; the agent sends the card
- If nobody picks up within seconds, the AI answers by itself

Both ways land in the same WhatsApp chat: the flats, the summary, the next step.

2 · FRONT DESK ▶ A CALL · THE AI ALONE

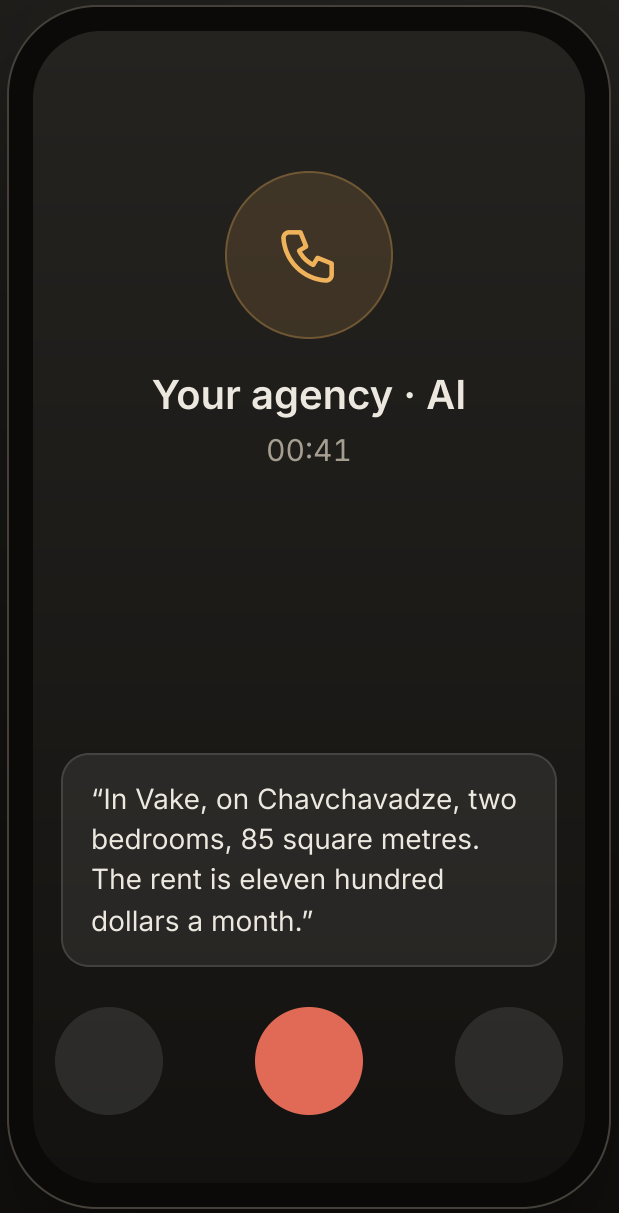

Listen to it answer a call.

01 Picks up at once in your agency's name, day and night, in the client's language.

02 Asks one clarifying question, searches your listings and the whole market, and offers one flat: street, size, price.

03 What it doesn't know, it doesn't invent: it asks your agent. The photos go to WhatsApp while the call is still on.

▶ Watch the video: lukakhijakadze.github.io/ai-front-desk-deck/en/#call

2 · FRONT DESK ▶ A CALL · AGENT + AI

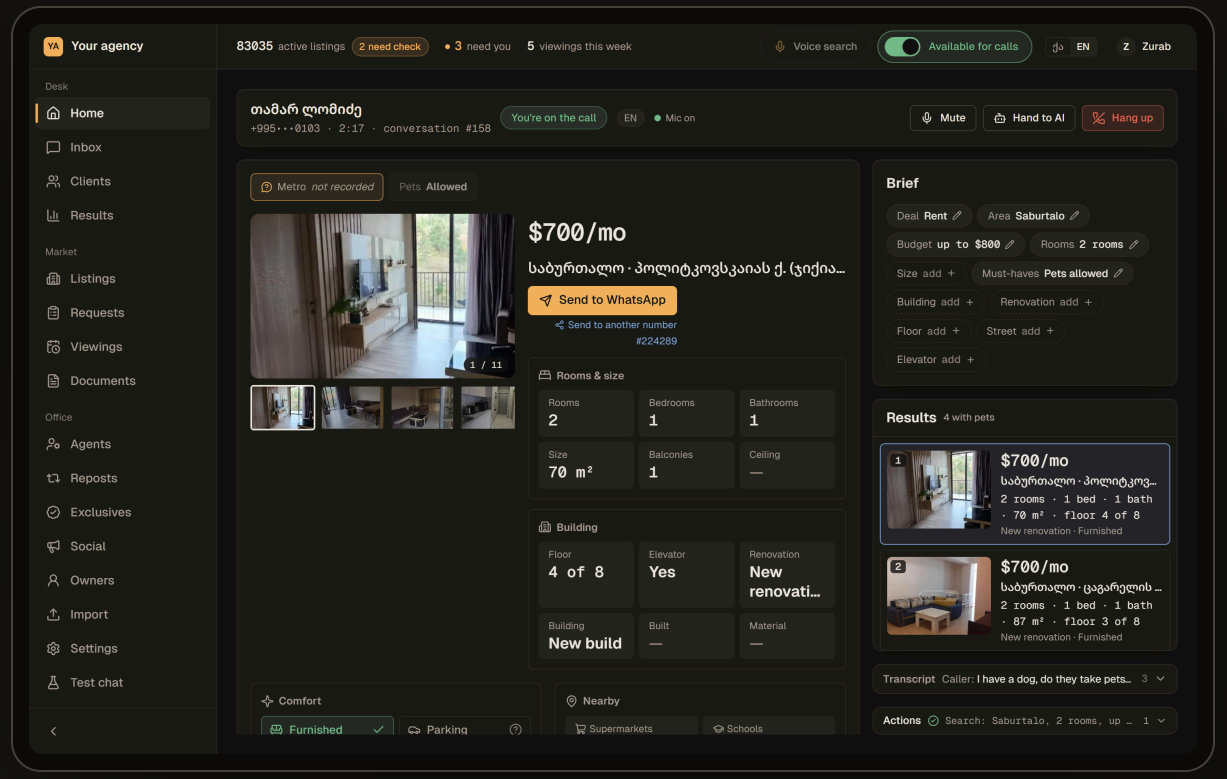

Your agent talks. The AI works beside them.

01 The call rings the Available agent's browser first, wherever they are. No answer in 5 s, and the AI takes it.

02 The AI listens, fills in the brief and finds the flats that fit. The agent does the talking and sends the client the card with one press.

03 Voice search: with no client on the line, the agent says the brief into the headset, the AI fills the filters and runs the search once deal, budget and area are known.

▶ Watch the video: lukakhijakadze.github.io/ai-front-desk-deck/en/#copilot

2 · FRONT DESK WHATSAPP

The call carries on in WhatsApp. Answers come in seconds, with photos.

After the call, in the chat

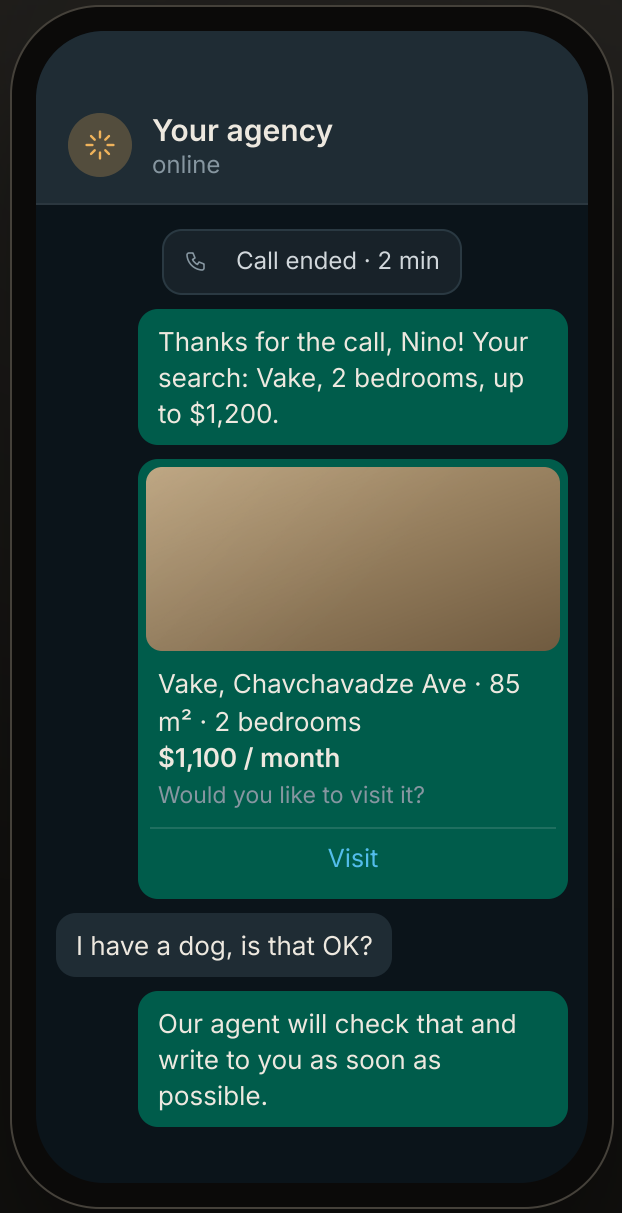

A thank-you, a recap of the brief and the flats from the call, with photos.

A new message, answered in seconds

In the client's language: one refining question, then listing cards.

One tap on “Visit” files a viewing request

What the AI doesn't know goes to your agent. The call and the chat sit in one history.

Viewings without the phone tag.

The client asks to see it

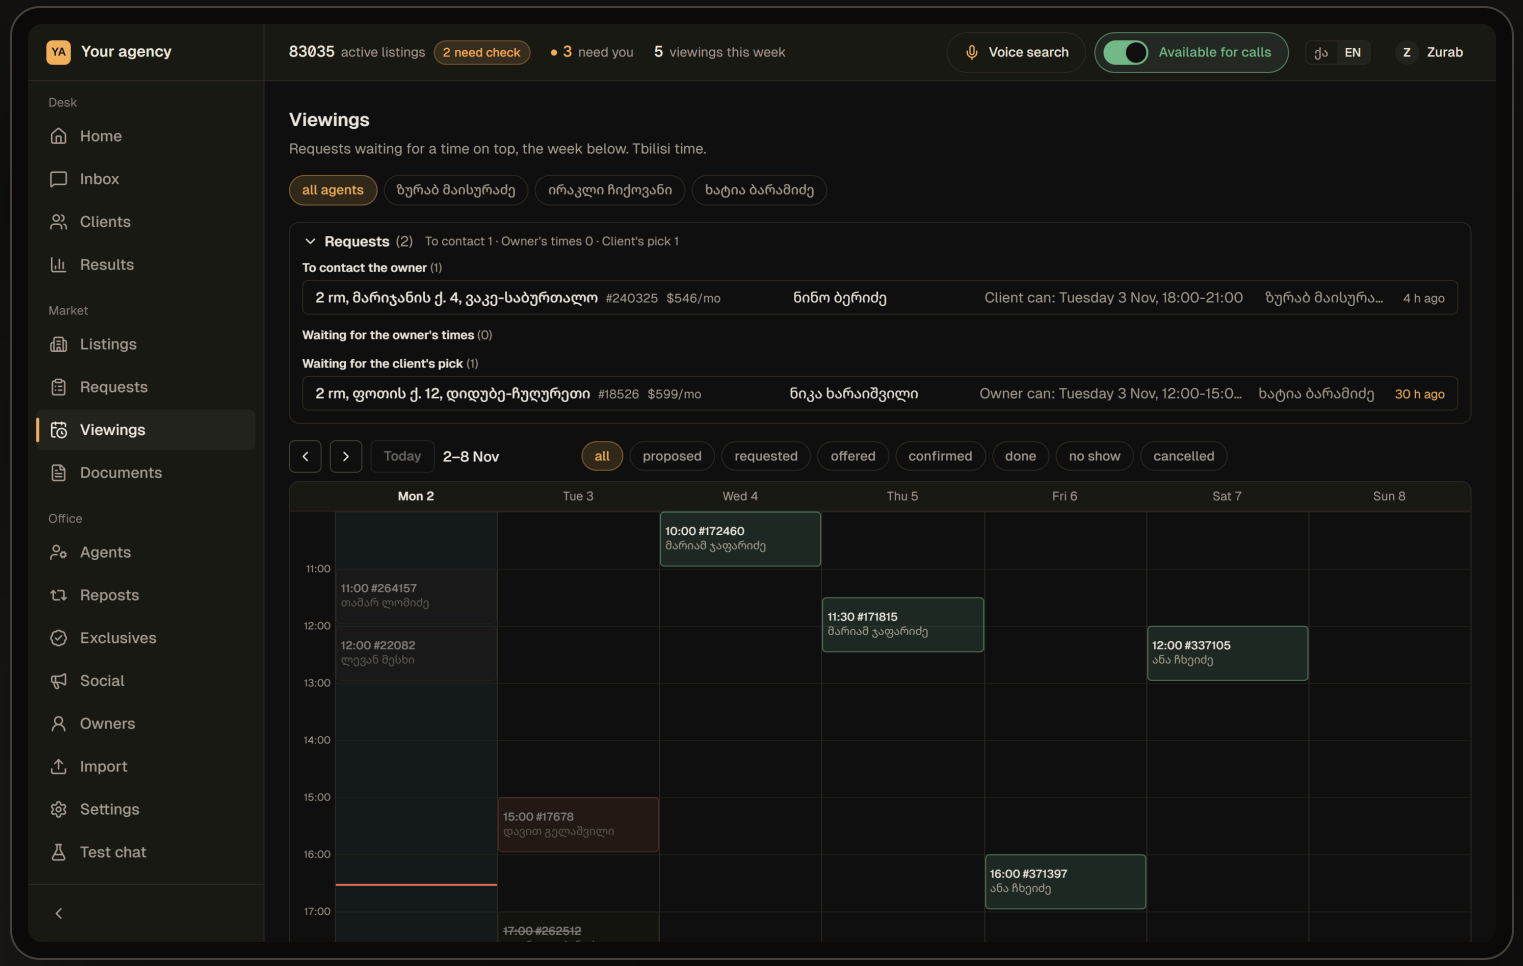

In the chat or with the Visit button.

Only in the owner's hours

Your agent enters the owner's times and the client picks one. The AI never names any other time.

The week on one screen

Confirmed, waiting, cancelled with a reason. Change it in one click.

2 · FRONT DESK NO CLIENT GOES COLD

Every brief is saved. Every new fit reaches the client.

A new flat
Yours or from the market

Checked against open requests
A fit from 0 to 100

A card to the client
On WhatsApp, with photos

“Visit”
A viewing request is filed

Your agent is notified
A ready, interested client

Automatic

Every complete brief is saved, with no agent needed.

03:30

Every night new flats are checked against every open request.

≤ 3 a day

Cards keep coming until your agent closes the request. No spam.

In the morning, one screen shows the whole day.

Agency head and agent views

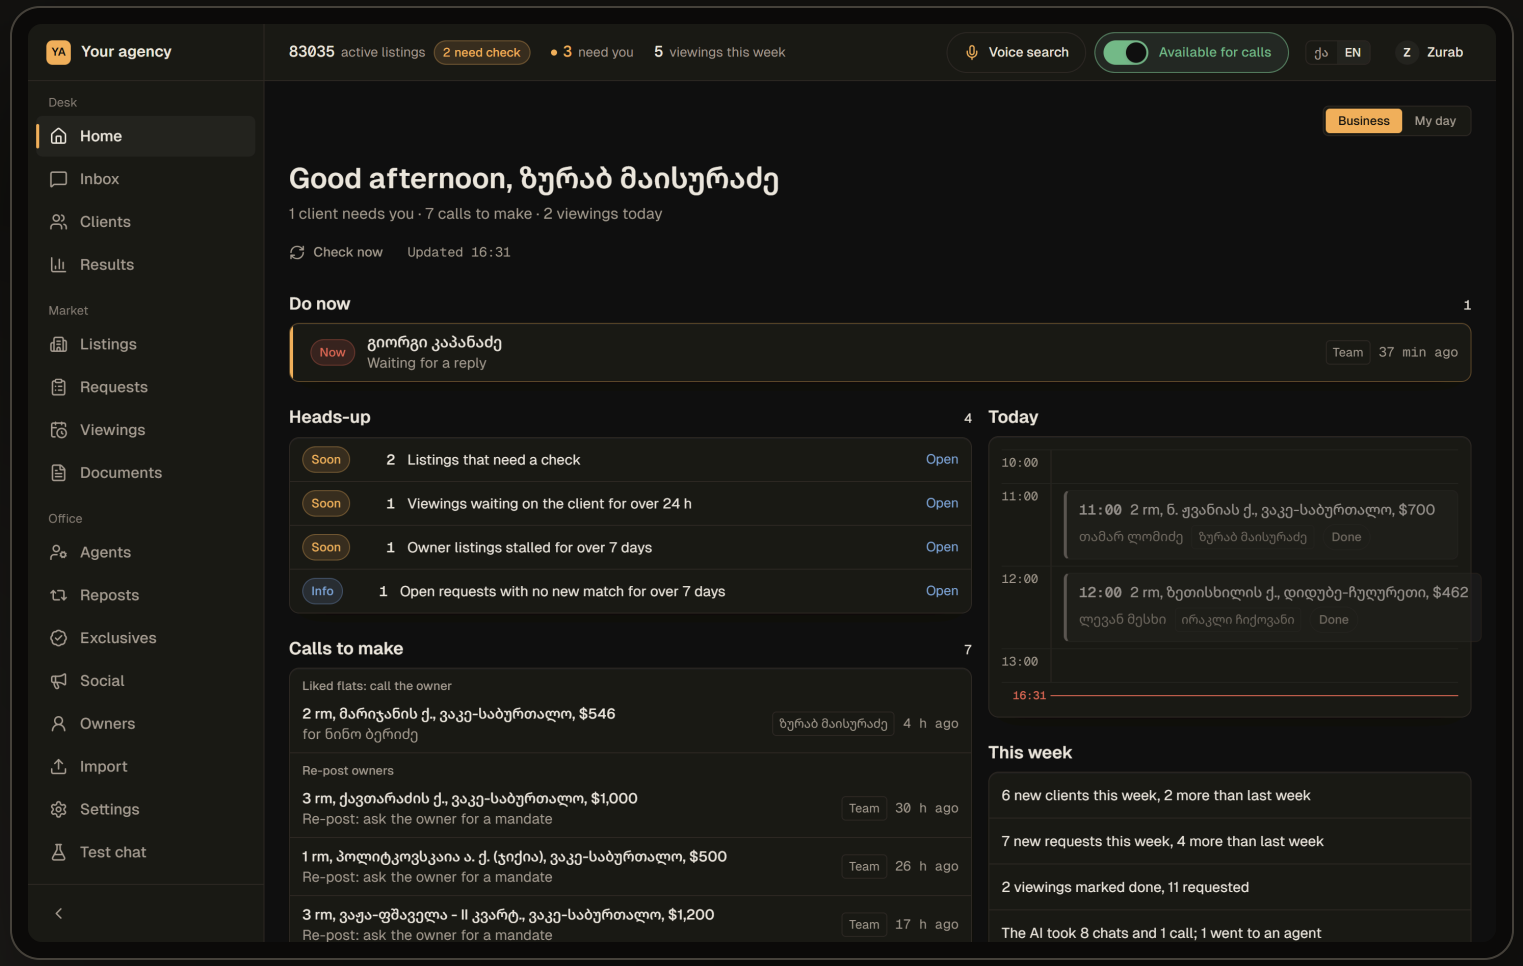

The agency head sees the business and the system's health. An agent's Home opens with My day, on their own and the team's clients.

Where you're needed

Who is waiting for an agent, today's viewings, whom to call.

Health at a glance

Ads per platform and a self-check every 2 minutes. Anything broken shows red.

One row per client. Calls and chats together.

One history

The call summary, the chat, the cards sent and the request in one place.

Flags

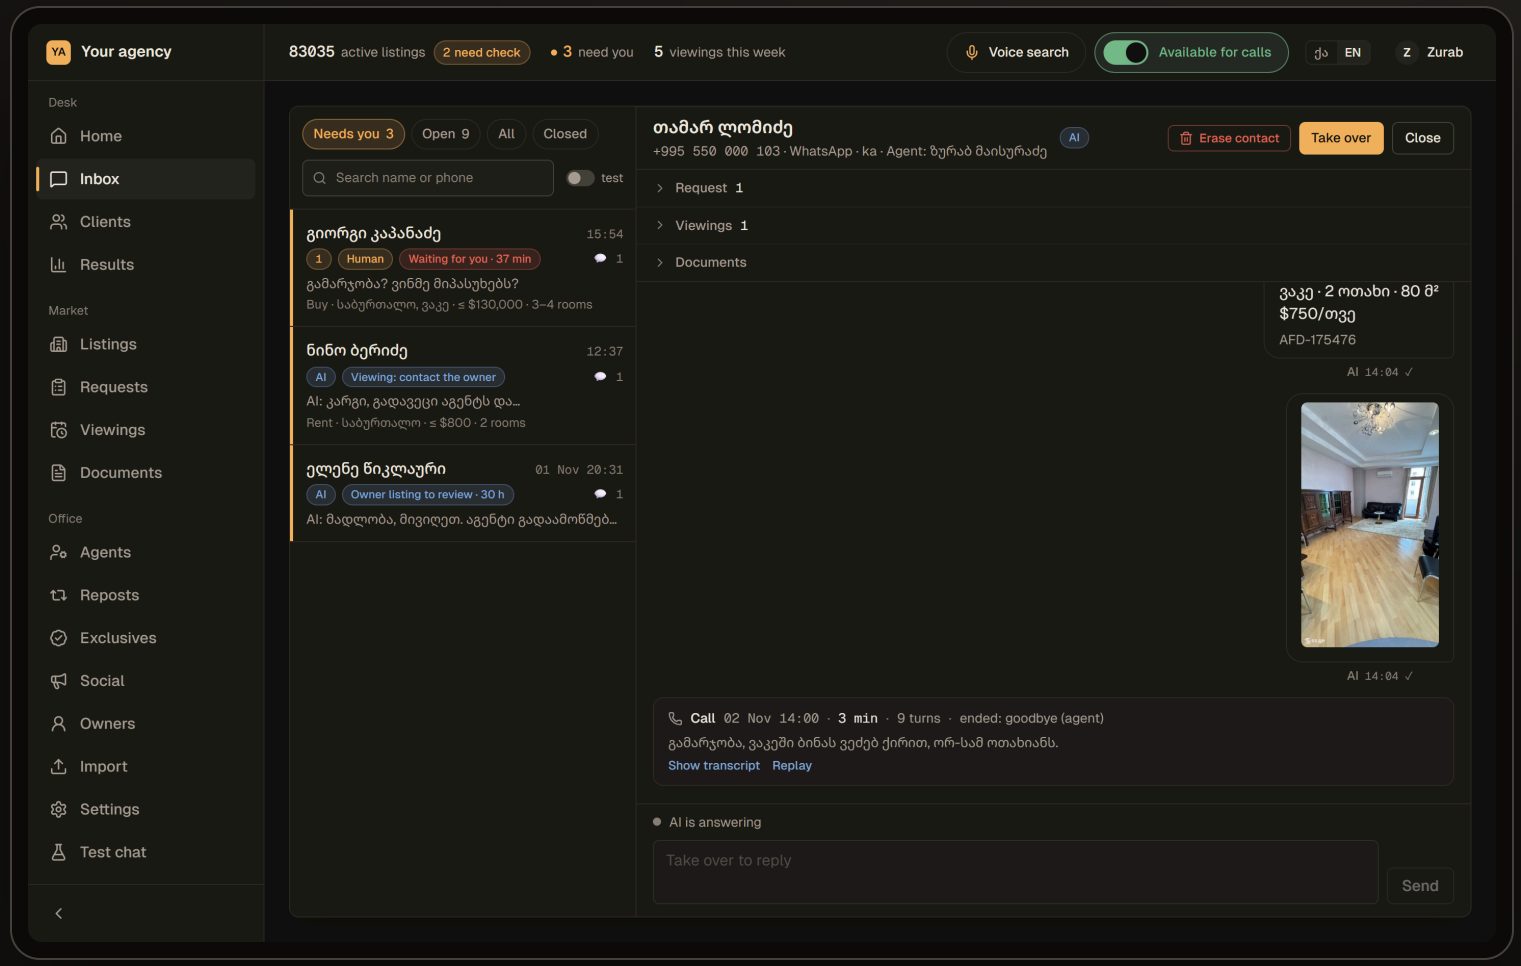

“Needs you”, “hand-off waiting”, “card not delivered”.

Take over in one click

The AI steps aside and your agent writes. Handing back is one click too.

Replay

Every search step: the filters, the top 5 shown and the hidden ranked candidates. A bad search can be flagged.

Each agent opens on their own day: whom to call, what's waiting.

My day

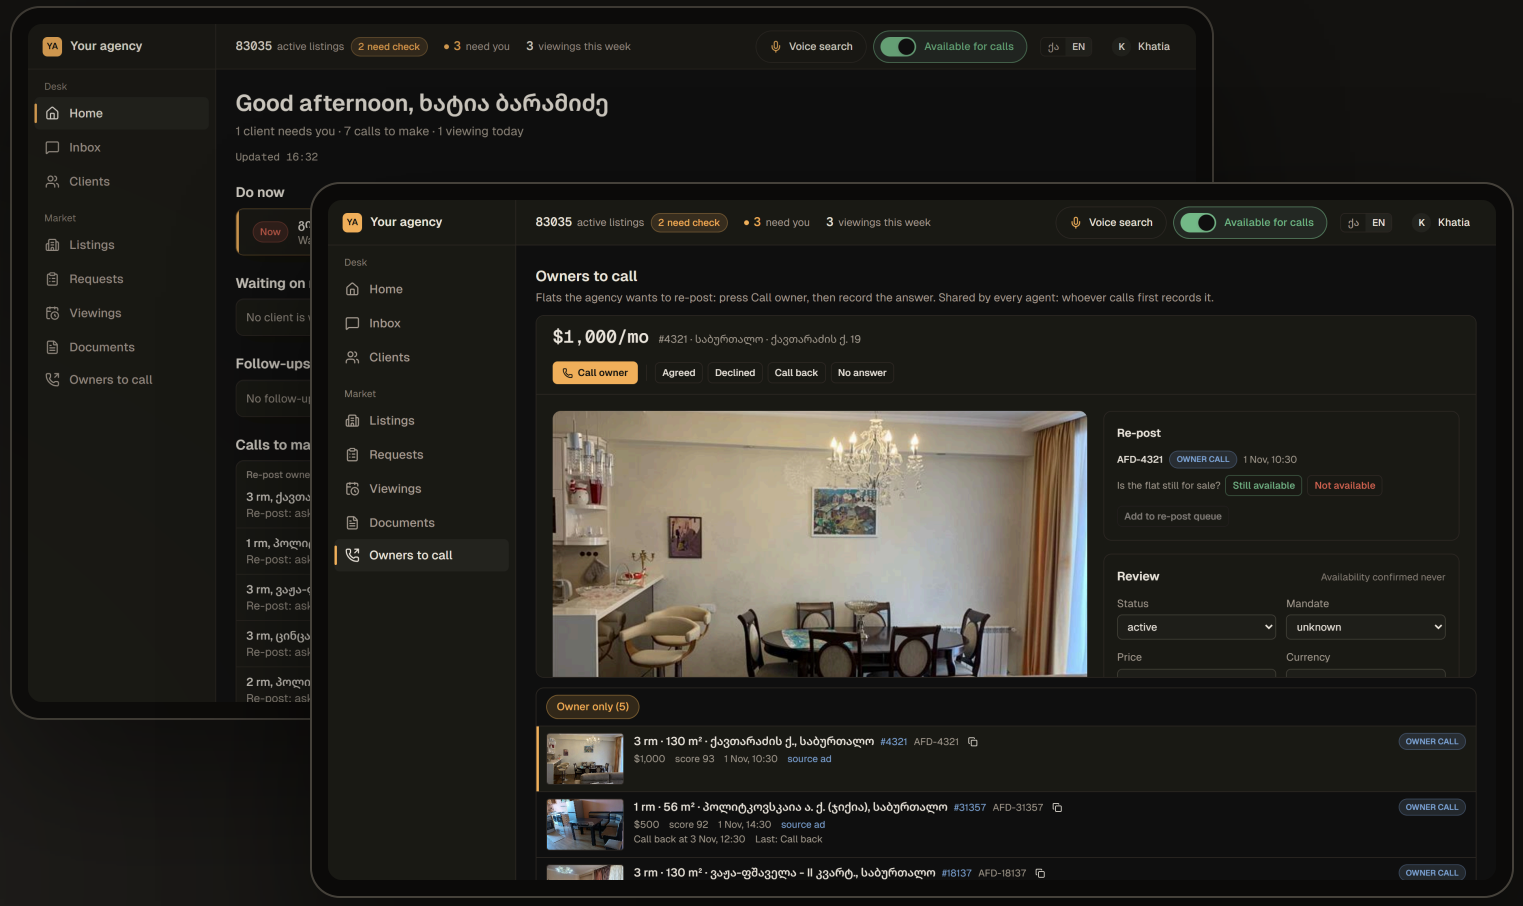

An agent's Home opens with My day: their own and the team's clients, today's viewings, who is waiting.

Owners to call

One shared queue, first come. When a client wants a viewing, My day says which owner to call.

Owner numbers stay guarded

A number shows only for flats in this queue or the agent's own live viewing. Every look is logged, at most 30 an hour.

The AI reviews the AI.

Clients who got stuck

A search going nowhere, a client gone quiet after the cards, a slow reply.

An hourly review

The AI reads the conversations and proposes the next step for each client.

Proposals only

It changes nothing by itself. Your agent decides.

WHAT IT SEES	WHAT IT PROPOSES
Nino Searching for 14 days, no new card for 7 days	Widen the area or the budget, or source new flats
Giorgi 2 cards sent, no reply for 3 days	Call instead of sending more cards
Ana AI review: 2 / 5, a question went unanswered	Open the review and read the conversation

Every hour the AI reads the finished conversations and scores each from 1 to 5. It changes nothing itself: your agent decides.

Every call and chat in one list: who handled it, where it came from, how it ended.

Who handled it

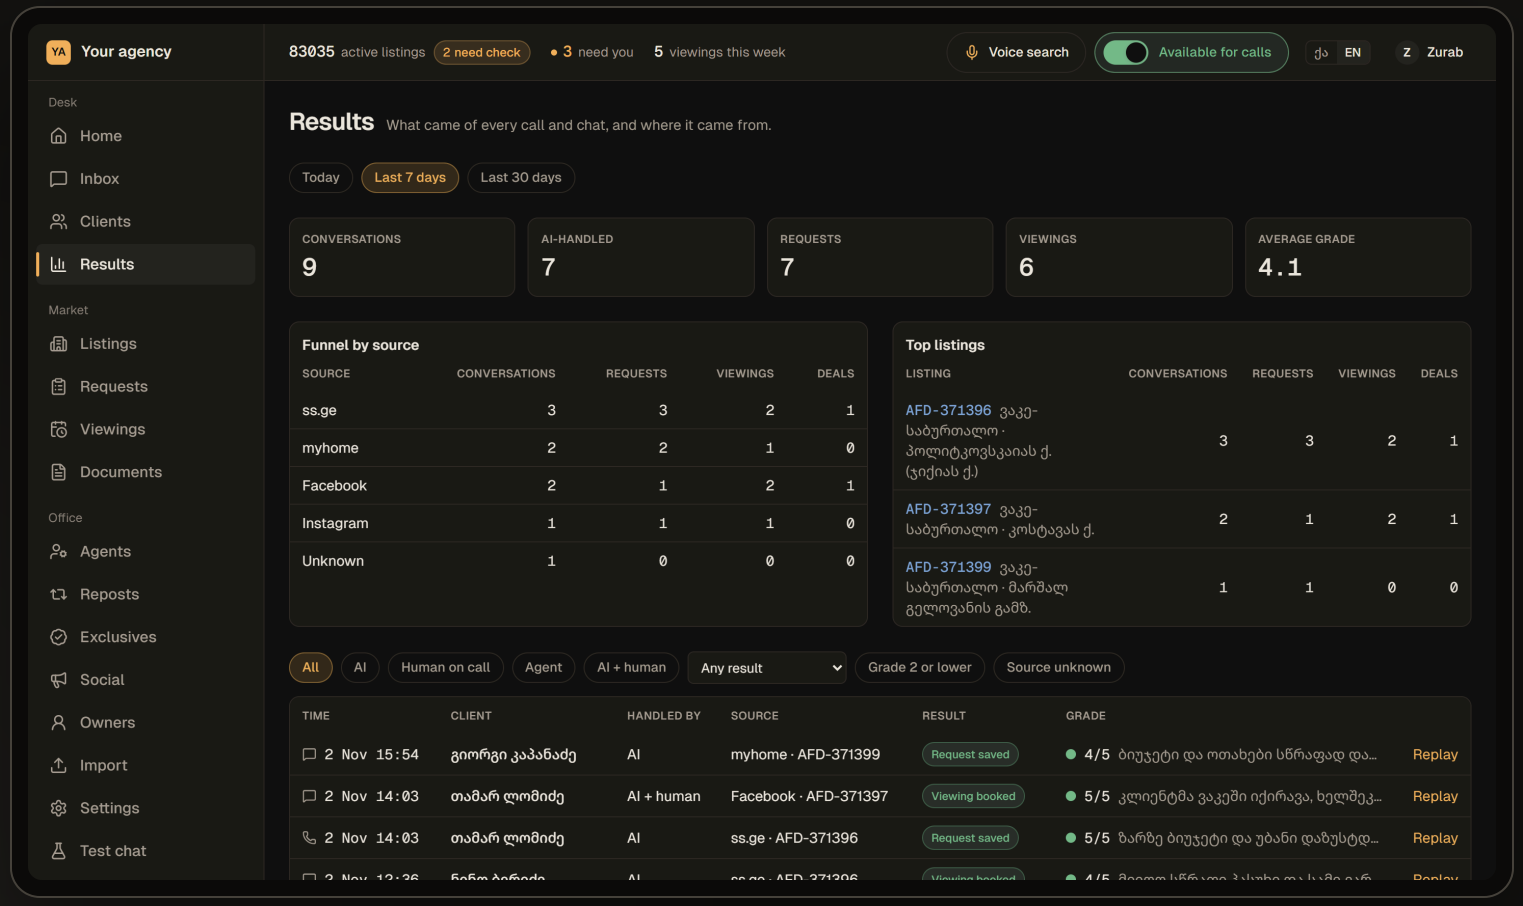

The AI, an agent on a call with the AI, an agent on the dashboard, or a mix. Today, 7 or 30 days, with the AI review grade.

Where they came from

ss.ge, myhome, Facebook, Instagram, a referral. Inferred where provable, asked once otherwise. A funnel per portal and the top flats.

How it ended

A viewing booked, a request saved, a hand-off, cards sent or a missed call. For the agency head only, with a WhatsApp digest at 21:00 every evening.

ss.ge and myhome.ge in one clean list.

Always fresh

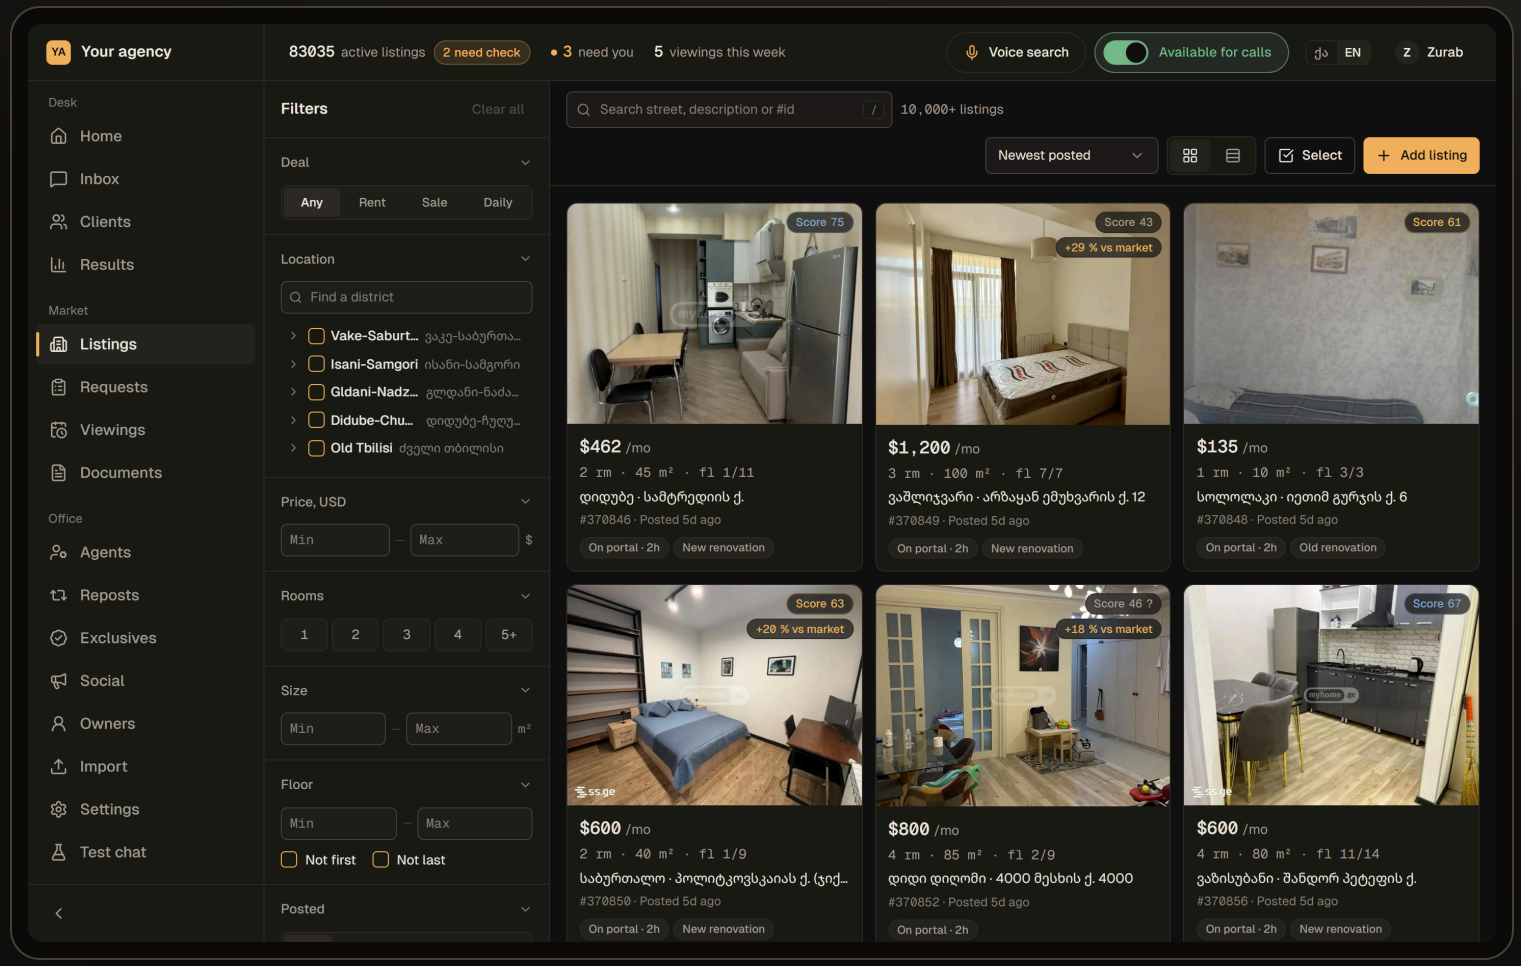

Every 2 hours by day, a full sweep every night.

Duplicates merged

400,000+ ads → 70,000+ flats (November 2026). The owner's own ad comes first.

Your flats alongside

Bare shells stay hidden unless the client asks for one.

Every flat scored 0–100, the way an experienced agent would judge it.

Price against similar flats

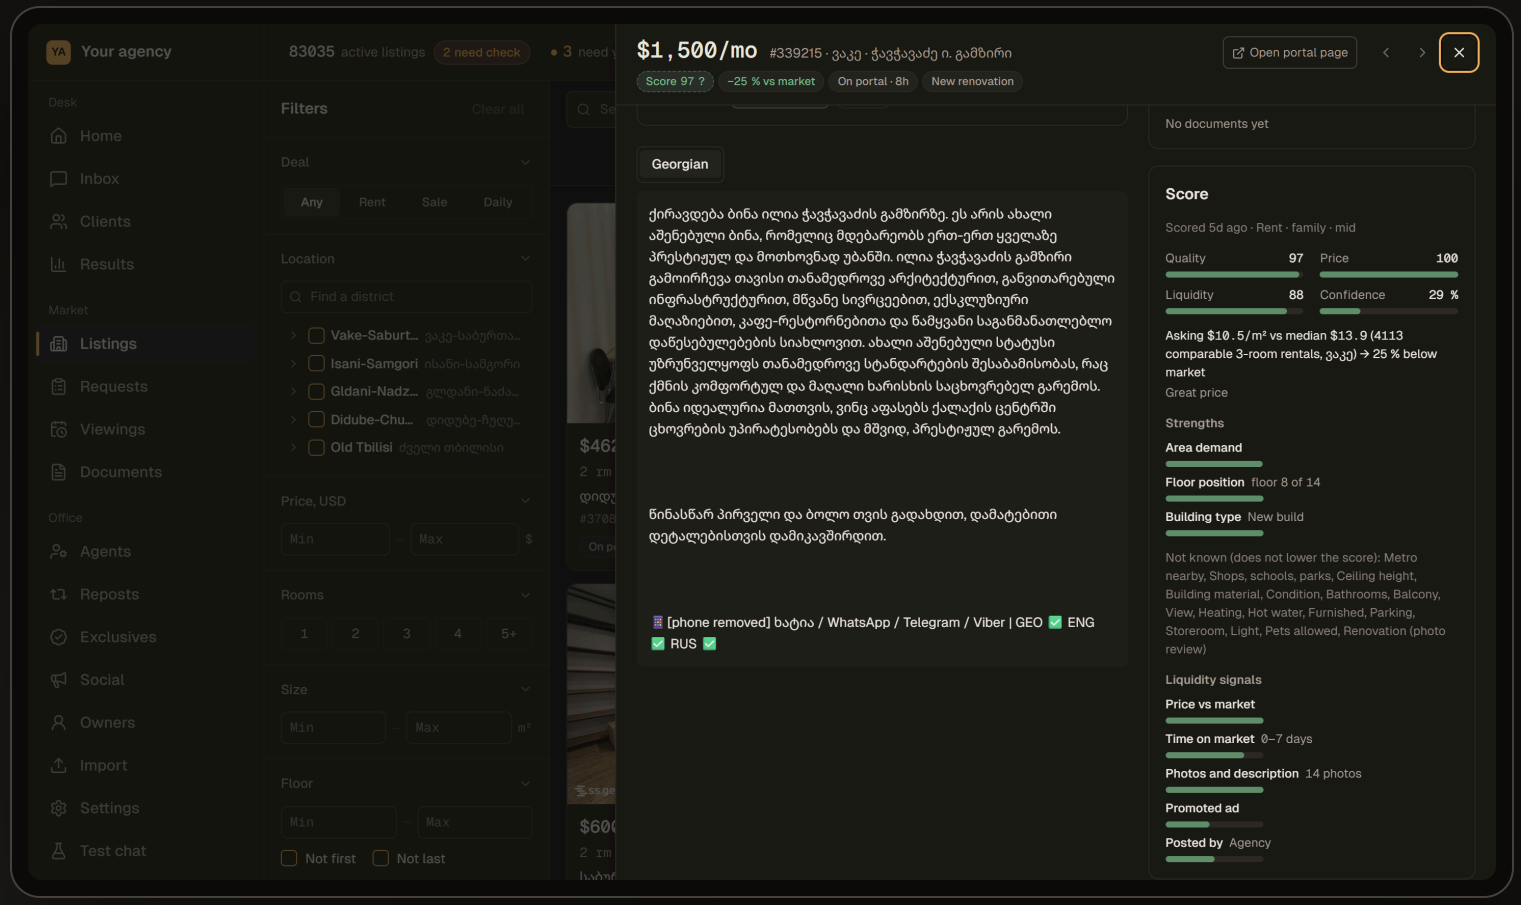

In the same area. A price that looks wrong counts as unknown, never as a bargain.

Condition and location

Renovation, building, heating, minutes to the metro, size.

Unknown never counts against it

The score shows how complete the information is.

Owners list on WhatsApp. Contracts are drafted in a minute.

Listing on WhatsApp

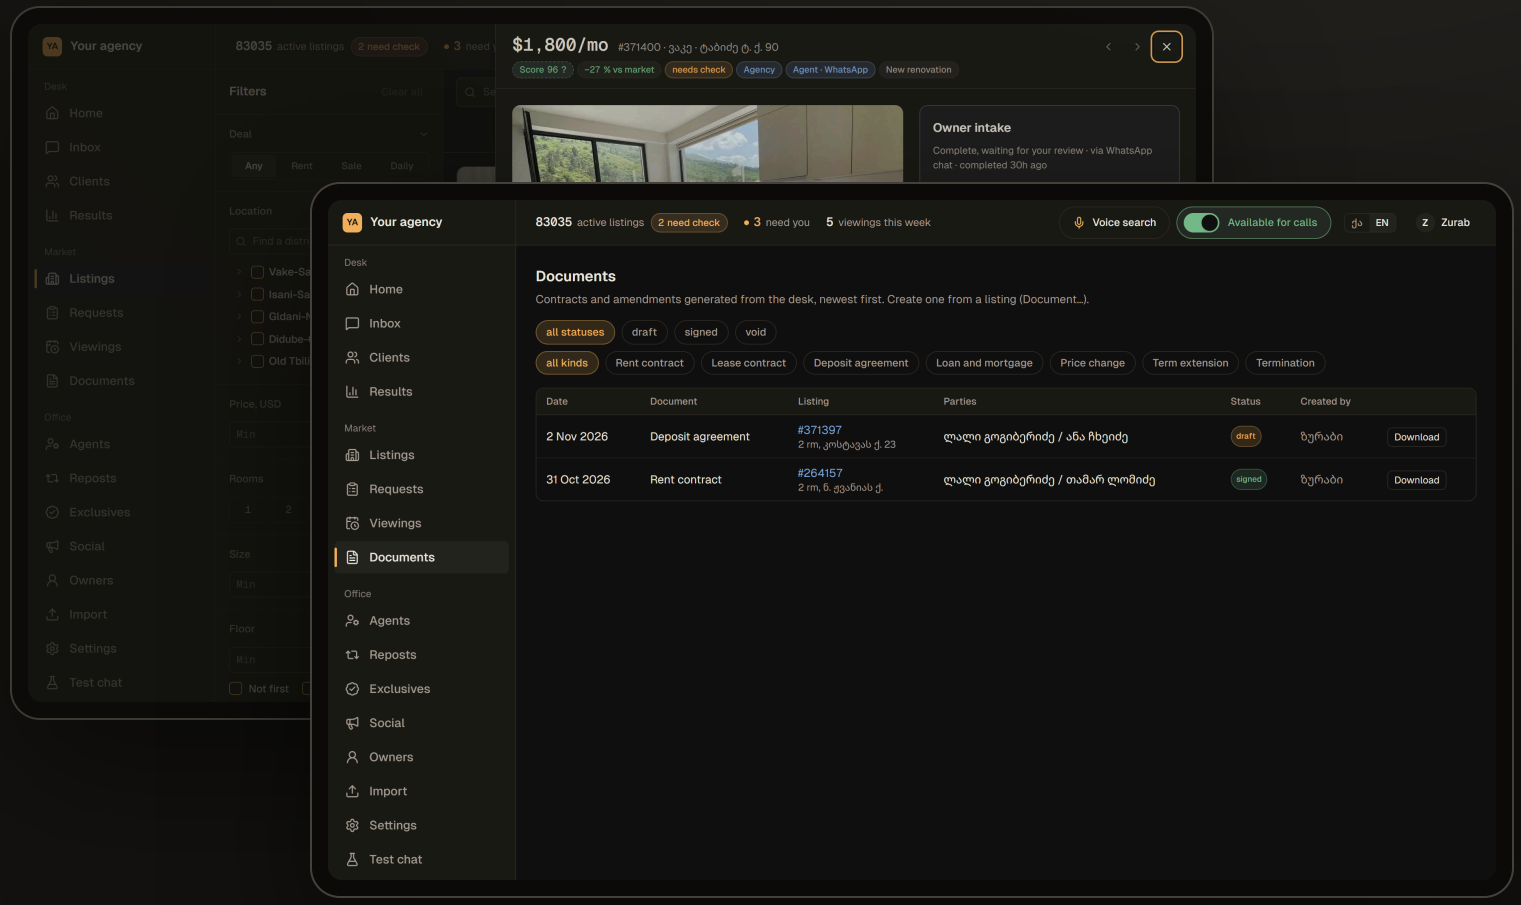

The AI collects details and photos, asks for what's missing and reminds. You approve.

7 contracts, prefilled

Rental, lease, loan and mortgage, earnest money, amendments. A Word file, staff only.

The owner stays private

Clients never get the owner's phone or the house number.

Add a flat once. One queue carries the ad to four platforms.

The owner agrees first

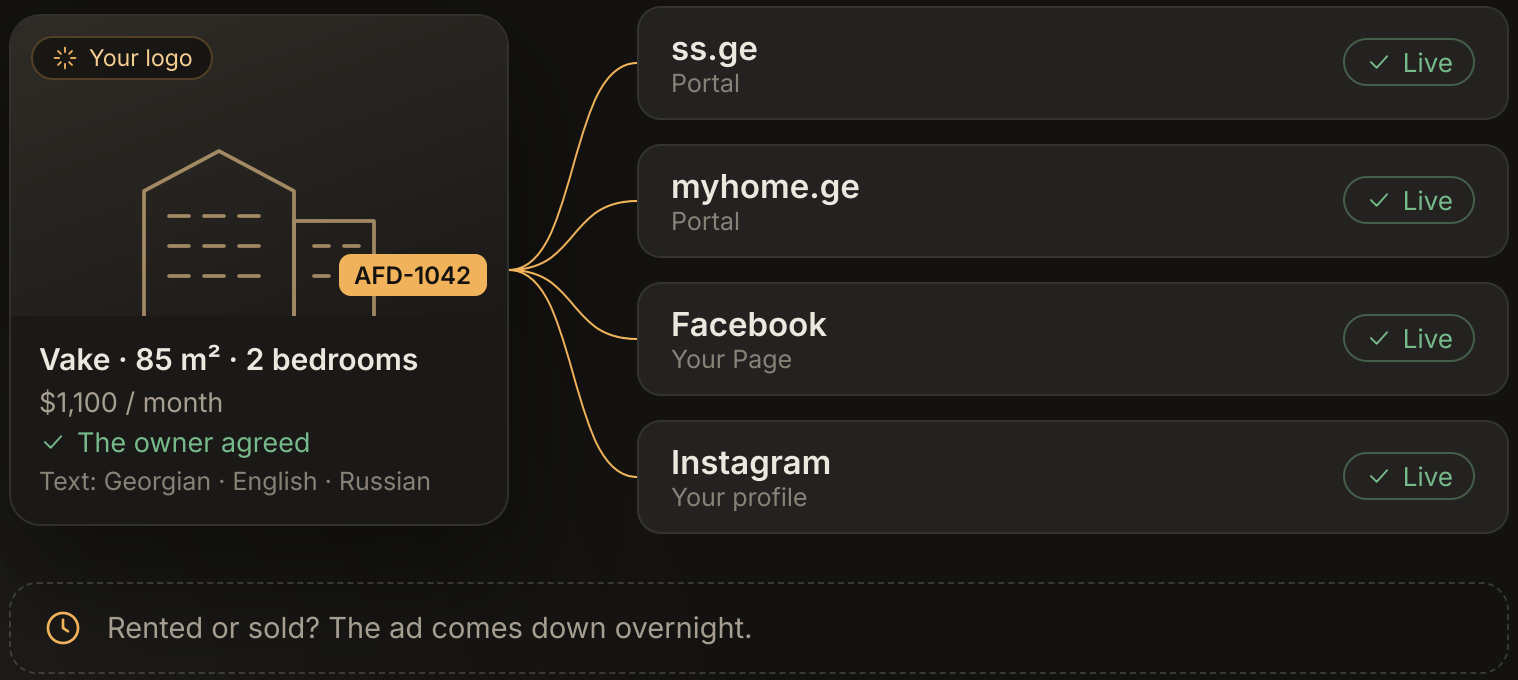

Agents call owners from the queue. A flat reaches the portals only with the owner's agreement, best-scored first.

ss.ge · myhome.ge · Facebook · Instagram

A bot posts to ss.ge from your balance, capped at 30 ₾ a month. On myhome a scheduled run takes the free posts; a paid one stays a person's press.

Your logo and a code

Your logo on every photo. The client quotes the code (AFD-1042); the AI answers about that exact flat.

Facebook and Instagram: one tile per flat, one Delete.

Mandated flats post by themselves

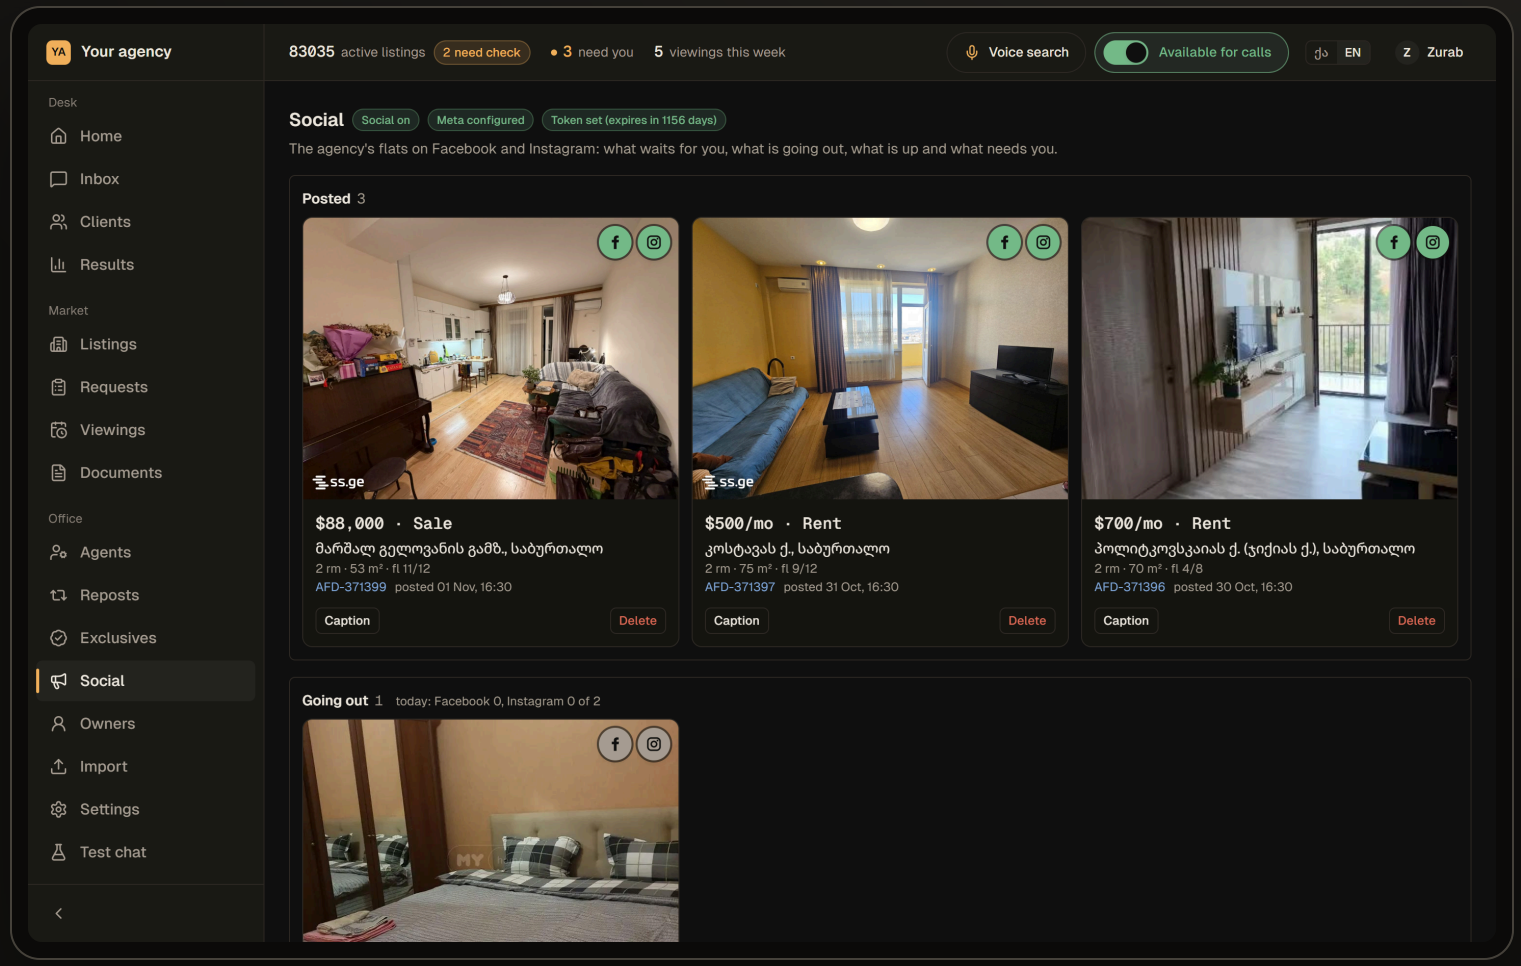

No review, in about a minute: up to 7 photos and a closing card, captions in three languages, a code and your WhatsApp number. 2 posts per network a day by default.

One tile per flat

A green, red or amber icon per network. One Delete for both; Instagram's half ends in the app. The photo opens the flat.

Owner and another agency

Flats both a real owner and another agency advertise. The agency head presses Post flat by flat, Facebook and Instagram only, with clean photos. One switch stops it all.

3 · BACKSTAGE CONTROL

You set the rules. The system looks after itself.

The AI off in one click

Any conversation or the whole AI. The dashboard in Georgian or English, one login per agent.

Updates never cut a call

A new version goes live only when no call or chat is in progress.

Checked every 2 minutes

9 checks: chat, calls, market, ads. Most problems it repairs by itself.

YOU DECIDE

The AI is on
Per conversation or for everything

Dashboard language
Georgian or English
KA · EN

A login per agent
Each with their own password

Erase after 12 months
Or when a client asks

THE SYSTEM CHECKS ITSELF EVERY 2 MINUTES

- Server
- Database
- Dashboard and chat
- Voice AI — Repaired
- Call server
- Phone line
- Call cache
- Market and ads
- WhatsApp link

Three bad checks in a row (~6 min) and the service restarts itself; call services wait for the call to end. Can't fix it? It shows red on Home.

4 · YOUR AGENCY WHAT CHANGES

Every client gets an answer. The salaries stay with the agency.

	TODAY	WITH ONE AI SYSTEM
Calls	Missed during viewings, at night, at weekends	The AI answers 24/7, or helps your agent on the call
WhatsApp	Answered the next morning	Answered in seconds, with flat photos
The brief	Agents ask the same questions on every call	The AI works out the brief; the client reaches your agent ready
The market	ss.ge and myhome.ge by hand, full of duplicates	70,000+ flats in one list, scored
Past clients	Forgotten after the first chat	New fits keep coming until the request is closed
Posting	Every ad typed by hand, four times	4 platforms from one queue, with your logo
Owners	Details and contracts typed by hand	Listing on WhatsApp, 7 prefilled contracts
Oversight	Management can't see what's going on	Every call, chat and request on one dashboard

50+ → 5

For example: where 50+ people answer phones and search listings today, 5 agents can run the viewings and the deals. The saved payroll stays with the agency.

It speaks in your name. So every sentence is checked.

Never makes things up

Every price, size and link is checked against the database before it's sent. What it doesn't know goes to your agent.

The owner stays private

Clients never get the owner's phone or the house number.

Honest hand-off

When a person is needed, the AI says so plainly and calls your agent in.

Off in one click

Any conversation or the whole AI, at any time.

Data gets erased

Automatically after 12 months, or in one click when a client asks.

Your data stays yours

Your clients, chats and listings belong to your agency and are never mixed with anyone else's.

Three steps to your first real client.

1

A 15-minute demo

You see a call, a chat and the dashboard live, on your own questions.

2

What we need from you

A WhatsApp Business number, your listings and one agent to take the hand-offs. Meta's approval takes a few days.

3

The first week

The AI answers real clients, every conversation shows on the dashboard, and we stay beside you.

The phone line: calls to your number can reach the AI in several ways. We pick the best route together.

NEXT STEP

Let's talk.

Fifteen minutes: we show you a call, a chat and the dashboard live, and you see how it would work in your agency.
